

MF3810 Information Sheet

Congratulations on your investment in quality. Thank you for purchasing a Cumberland Stove Works Multi-Fuel Parlor Stove from Ardisam, Inc. We have worked to ensure that the multi-fuel burning stove meets the highest standards for usability and durability. With proper care, your stove will provide many years of service.

The MF3810 is the MF3800 with the heat link addition installed. With that in mind, please remember the following:

1. The hopper capacity has doubled on the MF3810. This does not mean that it requires only half of the regular maintenance; please follow all recommended daily, weekly, monthly and annual maintenance as described in the MF3800 owner's manual.
2. Cumberland Stove Works does not recommend the use of legs on the MF3810 units; it can make the addition of fuel to the hopper difficult with its added height. All Cumberland stoves are certified for no leg installation, but must have ember protection.
3. The MF3810 is not intended to be converted back to the MF3800, and may require additional parts to do so.
